

Individual reflection: Week 38

What do I want to learn or understand better?

The agile strategy is getting more integrated, and a bit of the learning process is always getting better on my side. I'm getting better at dividing a user story into tasks and started also to understand react native better. What I want to focus on is to understand some apis usages since some of them are not so well integrated, and this could lead to errors. So choosing a well integrated api and understanding it is my priority now.

How can I help someone else, or the entire team, to learn something new?

I'm still at this point as I stated before. I'm trying my best to follow the workflow, in addition to answering any questions of my team members. I've also stated before that I would happily help my team members with any issue they could face during the developing evolution.

What is my contribution towards the team's use of Scrum?

My contribution is to discuss better scrum strategies and always improving the workflow.

What is my contribution towards the team's deliveries?

Three bullet points.

- Try my best to deliver as the workflow proposal stated
- Try my best to deliver on time
- Try my best to deliver that can increase customer value
