

## Individual reflection: Week 41

What do I want to learn or understand better?

This sprint I was having problems with fixing Promises in React Native, I ended up requesting some help from other group members which gave me more understanding to handle Promises and understand how they work. Most of the errors I got were syntax errors in JavaScript. This gave me the chance to understand those syntax errors better and handle them properly.

How can I help someone else, or the entire team, to learn something new?

We were using this tool in VScode where we can share our code with others. This tool gave us a chance to change other code and at the same time explain how things work when helping out other team members. I personally try to provide my team members with valid solutions from stackoverflow for example. Sometimes it requires good experience with problems to solve them.

What is my contribution towards the team's use of Scrum?

My contribution has always been the same. From the beginning I thought personally that the scrum stand-up meetings wouldn't give any results, but on the contrary it showed a big help for the team. Because everyone was acknowledging the faced problems in addition to personal progress. I try to be on time and help my team members organize the documents.

What is my contribution towards the team's deliveries?

Hasn't changed
