

Sophias individual reflection: Week 6

What do I want to learn or understand better?

This week I learned how to do both some UI testing and functional testing. We also commented the code and cleansed a bit this time. Previously it was quite clear what was in the code when it came to the GUI but we commented on the tests and functions this time. We also added quick buttons for adding and removing trash bags on the home page but the removing part could be adding some future problems for other features. I think we have to fix that part or at least give it some checks, but at this moment the feature is working. I have also created a list with some achievements and made some bit icons for the badges. So this week has been pretty good and I have learned a lot of new things. I would like to be better and be able to create by having experience rather than googling everything. I will just keep on practicing until I get there!

How can I help someone else, or the entire team, to learn something new?

This week I have been both doing my own task and then been collaborating with another team member which went well. I did explain for another team member what their assignment was until they said that they understood. I feel like it did not come through this week though because the same questions that I explained last time were still asked this week. I did respond again and tried to help and they said once again they understood. I am not sure how to respond after that because I am not sure if they do understand. I do want to help more but sometimes it feels like that they do not listen properly or that they need more repetition. What I will do is simply to just help and answer if anyone has any questions but it feels difficult to help sometimes when it does not come through.

What is my contribution towards the team's use of Scrum?

This week I helped with writing what assignments we all have for next week's sprint and also checked what kind of user stories we have finished this week. It feels like the application is really coming together, both the design and functionality. Right now we have some few fixes left and continuance from last week's sprint. We will take a look at the final report and prepare that document and fix all issues that are yet to come. It feels good that we are planning an extra week in case we have other issues so we can help each other solve it properly.

What is my contribution towards the team's deliveries?

I have created a list of achievements with the titles, descriptions and drew custom bit icons for each achievement. I have also created tests and comments from the last sprint and also have done some sketches on how the application would look as a whole. I thought of some issues and some solutions for the removal button and because of that I am going to have that until next sprint. It feels good to keep planning on what is next and now I just want to have a finished product. So we will just continue to work on our fixes and try to put the whole project together at last.
