Individual reflection: Week 37

What do I want to learn or understand better?

I'm trying to understand the user stories better, and also trying to see the scope behind dividing those user stories. I'm also trying to make myself familiar with the environment we will use to make our app. I do need to understand how every sprint should be done, and how DOD for example is reflected on the costumer side.

How can I help someone else, or the entire team, to learn something new?

Every single useful information I'm finding regarding the app, I'm trying to make the team familiar with it. I will also try to start discussions with my team while developing the app. It will make us help each other when we have struggles.

What is my contribution towards the team's use of Scrum?
I had just a lot of ideas and discussed with the team especially when we shaped our acceptance criteria. I also tried to discuss the fact that some of the user stories could be shaped to fit other user stories.

What is my contribution towards the team's deliveries?
Always try my best to deliver on time and understand how important it is to deliver on time. Also the fact that the part I deliver regarding code should follow a template, in order to make it easier for my team to understand what I did.
