Individual reflection: Week 8

Joke is on me, I thought last week was the last individual reflection but apparently not.

What do I want to learn or understand better?

Besides reading instructions more carefully, I want to learn more about that Recipe API that one of the groups (was it OTTOWA?) used, mainly because it looked really cool.

I don't feel like there is much for me to do and learn right now when we have "released" our app. Maybe refactoring a bit och figuring out how to make classes as the allAchievement-file looks rather messy and would benefit from an overhaul.

How can I help someone else, or the entire team, to learn something new?

Right now I'm researching acceptance criteria and acceptance tests to get a better understanding of how it works and how our way of doing it differed from the mainstream way of doing it. I will report my findings to the group upon our next meeting.

What is my contribution towards the team's use of Scrum?

Nothing much this week. We had a meeting about how we were going to write the final report, at what dates and all. Besides that, we haven't had a need for any agile or scrum-specific techniques.

What is my contribution towards the team's deliveries?

I am almost finished with my parts of the final report, as that were our goal this sprint and next, but I'd rather be finished early. Other team members might get some inspiration from what I have written and it might make their parts easier to write!
