**Project Epic**

The project is a mobile application that promotes users collecting garbage from the environment. The user shares what garbage they have collected through a picture and gain score which can be seen by other users. Users of the application have the ability to share when and how much garbage they have collected on social media platforms. The application has a modern and functional interface which entices the younger generation to collect garbage.

The app aims to meet? the goals 14 and 15 (with focus on 15) of the UN's Sustainable Development Goals

Project Backlog
- app development environment
- server development environment
- basic app
- basic server
- app icon
- app layout
- app graphic design
- user system
- image upload system
- user score system
- social media integration

Stories by theme

Ideer: Större event för att samla skräp, badges om man deltagit, arrangemang för renova att komma och hämta upp om en större grupp vart ute och plockat, kunna dela hur duktig man är på social media, lägga upp bild/share location för upphittade "skräpiga platser" typ efter festivaler - användarna skapar eventen om de startar en större (oklart än så länge),
